SAMPLE INSTALLATION DIAGRAM

Step 1 Transformer Location

Determine where you will plug in your transformer / power supply. Locate transformer in a location that is accessible in the unlikely event of servicing. You can have the transformer hooked up to a wall outlet that is switched or hard wire the transformer directly to a switched circuit as long as you leave access to the transformer per electrical code.

Step 2 Determine Location of lights and Prep

DEKOR® Under Cabinet lights are easy to intall but you may want to pre drill 1/4" holes to run cable and connectors for light bars and controllers. These holes may be to run cables and connectors between cabinets or up through the bottom of the cabinets.

Step 3 Install Lights

DEKOR® Under cabinet LED lights have built-in adjustable mounting brackets. Open brackets on light to 90°. Use supplied screws to attach light bars under the cabinets, toward the front of cabinet, behind overhang.

After light bar is installed, plug in to power, and then adjust bar to desired angle. Brackets ratchet to allow variable angles of light on the counter allowing you to focus light where you want it.

For additional cabinets or to add lights 12" and 20" Undercabinet Light bars and 3' cables are also sold separately www.dekorlighting.com

Optional Accessories:

LED LIGHT BAR KITS CONTAIN

- 12" Kit - (4) 12 Inch Warm White LED Under Cabinet Light Bar
- 20" Kit - (2) 20 Inch Warm White LED Under Cabinet Light Bar
