RE: DEKOR® Lighting New EZ Plug-N-Play 2-Wire Cable and Connector System

DEKOR® Lighting is extremely pleased to announce, we are transitioning to a new EZ Plug-N-Play 2-wire cable and connector system.

At DEKOR® Lighting we constantly strive for advancements in manufacturing improvements and product quality and long-term product performance. Our new EZ Plug-N-Play 2-wire cables and connectors are very user friendly. This heavy-duty wire with a twist locking collar and an O-ring will handle the harshest environments. We carefully designed this new system to be backwards compatible with our current clear wire cables in the market. Over the next few months DEKOR® will gradually introduce this new product into the market.

To all of our valued customers, please expect and know the following:

- A combination of our current clear wire products mixed with our new 2-wire black cables and connector products.
- The new 2-wire black cables and connectors are backwards compatible with our current clear wire cables and connectors.
- The new 2-wire black cables are round.
- When using our current clear wire with our new 2-wire black, the twist collar will not be used.
- When using the new 2-wire black cables with the new splitters, thread the collar until it's snug.
- The new 2-wire black cables and connectors have a defined polarity key similar to our current clear wire connectors.
- The T-splitter, 6-port and female to female connectors current and new will be compatible with either cable type.
- Over time, all products will be transitioned to the new 2-wire system.

Thank you, for your patience as we continue to innovate and build the best for our customers.

Sincerely,

DEKOR® Management
